Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
mat=np.arange(1,26).reshape(5,5)
mat
```

```
array([[ 1,  2,  3,  4,  5],
       [ 6,  7,  8,  9, 10],
       [11, 12, 13, 14, 15],
       [16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])
```

Too print last 3 rows

```
mat[2:,1:]
```

```
array([[12, 13, 14, 15],
       [17, 18, 19, 20],
       [22, 23, 24, 25]])
```

To access the element 20 in the matrix

```
mat[3,4]
```

```
20
```

To print first 3 rows in 2nd coloumn

```
mat[0:3,1:2]
```

```
array([[ 2],
       [ 7],
       [12]])
```

To access last row in the matrix

```
mat[4,:]
```

```
array([21, 22, 23, 24, 25])
```

Last two rows of matrix

```
mat[3:,:]
```

```
array([[16, 17, 18, 19, 20],
       [21, 22, 23, 24, 25]])
```

Now do the following

Get the sum of all the values in mat

```
np.sum(mat)
```

```
325
```

Get the standard deviation of the values in mat

```
np.std(mat)
```

```
7.211102550927978
```

Get the sum of all the columns in mat

```
np.sum(mat,axis=0)
```

```
array([55, 60, 65, 70, 75])
```
